

FINIOR CAPITAL LIMITED

Key Information Document CFD on an Index

Update: 01/04/2022

Key Information Document

CFD on an Index

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products. We have included examples of certain products/terms to explain the matter and these are not recommendations from our side.

Product

Product Name Contract for difference (“CFD”) on an Index.

Product manufacturer “Finior Capital Limited (“Company”), a Company limited by shares that is formed and registered under the Laws of the Abu Dhabi Global Market (“ADGM”) under license number 000001143, authorized and regulated by the Financial Services Regulatory Authority (“FSRA”) under reference number 170018.

Further information You can find more information about Finior Capital Ltd and our products at <https://www.finiorcapital.com/>. You can contact us using the details on our website <https://www.finiorcapital.com/> or by calling +971 2 235 16 00.

Alert

You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type

This document relates to products known as ‘contracts for difference’, which are also known as CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity or index. This means you will never own the underlying asset, but you will make gains or suffer losses as a result of price movements in the underlying asset to which you have the indirect exposure.

This document provides key information on CFDs where the underlying investment that you choose is financial index such as the FTSE 100 or S&P 500 and etc. An index derivative is a contract with a collection of securities as the underlying asset.

Key Information Document

CFD on an Index

You can visit <https://www.finiorcapital.com/> for information on the underlying assets available to you.

Objectives

The objective of trading CFDs is to speculate on price movements (generally over the short term) in an underlying asset by obtaining an indirect exposure to the underlying asset. Your return depends on movements in the price of the underlying asset and the size of your stake. For example, if you believe the value of an Index is going to increase, you would buy a number of CFDs (this is also known as “going long”), with the intention to later sell them when they are at a higher value. The difference between the price at which you buy and the price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below). If you think the value of an Index is going to decrease, you would sell a number of CFDs (this is also known as “going short”) at a specific value, expecting to later buy them back at a lower price than you previously agreed to sell them for, resulting in us paying you the difference, minus any relevant costs (detailed below). However, in either circumstance if the Index moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you would owe us the amount of any loss you have incurred together with any costs.

To open a position and to protect us against any losses you incur, you are required to deposit a percentage of the total value of the contract in your account. This is referred to as the margin requirement (see further below). Trading on margin can enhance any losses or gains you make.

Term

Spot CFDs have no minimum holding period. You decide when to open and close your positions unless stated different on our Website or Electronic Trading Services.

We may close your position without seeking your prior consent if you do not maintain sufficient margin in your account, but we are under no obligation to do this. More information about when we can close your position is set out below.

Key Information Document CFD on an Index

What are the risks and what could I get in return?

Risk Indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level.

In some circumstances you may be required to make further payments to pay for losses. The total loss you may incur may significantly exceed the amount invested. Your losses can materialize quickly due to the use of margin (see further below).

CFD trading requires you to maintain a certain level of funds in your account to keep your positions open. This is called margin. You will be able to open a position by depositing only a small percentage of the notional value of the position, creating a leveraged position. Leverage can significantly magnify your gains and losses. If the funds in your account are no longer sufficient to keep your position open, you will be required to make up this shortfall. This is a margin call. If you do not meet your margin call, we may close your position (immediately and without notice) and you will realise any losses. You could, therefore, lose more than your entire investment.

Key Information Document

CFD on an Index

Our CFDs are not listed on any exchange, and the prices and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and are not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

Be aware of currency risk.

It is possible to buy or sell CFDs in a currency which is different to the base currency of your account. The final return you may get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

This product does not include any protection from future market performance so you could lose some or all of your investment.

Performance Scenarios

This key information document is not specific to a particular product. It applies to a CFD on any index. However, each CFD you enter into with us is specific to you and your choices. You will be responsible for choosing the underlying asset; when you open and close your position; the size of your position and your margin; and whether to use any risk mitigation features we offer (such as stop loss orders), for example.

Example:

CFD INDICES							
DOW JONES Held Intraday							
Opening Price	P	24851					
Trades Size	TS	200 contracts (2 lot)					
Margin %	M	\$2000 per lot (fixed)					
Margin Requirement (\$)	$MR = P * TS * M$	\$4,000					
National Value of the trade (\$)	$TN = P * TS$	\$4,970,200					
LONG				SHORT			
Performance Scenario	Closing Price	Price Change	Profit / Loss	Performance Scenario	Closing Price	Price Change	Profit / Loss
Favourable	26352	6.04%	\$30,020	Favourable	22325	10.16%	\$50,520.00
Moderate	25486	2.56%	\$12,700	Moderate	24003	3.41%	\$16,960
Unfavourable	23410	-5.80%	(\$28,820.00)	Unfavourable	25325	-1.91%	(\$9,480.00)
Stress	21651	-12.88%	(\$64,000.00)	Stress	26132	-5.15%	(\$25,620.00)

Key Information Document

CFD on an Index

The stress scenario above shows how small price movements can rapidly lead to losses and in this circumstance, will result in a forced close out of your position. In this stress scenario you may owe us additional money for your trading losses and lose more than your investment. This does not take into account a situation where we are unable to pay you. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. What you get will vary depending on how the market performs and how long you keep the investment.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you get back. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

What happens if the company is unable to pay out?

If the company is unable to meet its financial obligations to you, this could cause you to lose the value of any CFDs you have with the company. The company segregates your funds from its own money in accordance with the Financial Service Regulatory Authority rulebooks and module of ADGM

What are the costs?

This table shows the different types of costs involved when you trade CFD products
